During these times of change and financial uncertainty, I want to assure our alumni and friends that Central is operating from a position of real strength and accomplishment. In addition to the many external recognitions that we’ve reported in the past, the University continues to be very highly regarded. To take just three examples, Princeton Review has now twice selected CCSU as a “Green Institution” for our commitment to sustainability, and we are one of only 346 colleges in the nation to be so honored. The Carnegie Foundation for the Advancement of Teaching has selected the University as a Community Engagement Institution for our efforts in reaching out and embracing our communities; only 114 other institutions in the nation have been selected for this special recognition. And President Obama’s Higher Education Community Service Honor Roll included CCSU among its 200 honorees.

As reported elsewhere in this issue, our fundraising efforts have been very successful. The University’s endowment ended the 2011 fiscal year at an all-time high of $33.4 million. We are honored in particular by Carol A. Ammon ’73, the late Anthony and Helen Bichum, and Dr. Mong Koo Chung of Hyundai Motor America. Their extraordinary generosity demonstrates great faith in Central as an institution.

A recent Report Card on our progress toward the goals established for our strategic plan showed remarkable gains in nearly half of the goals and really solid advances on all but a handful. Standing out — an A+, in fact — is the increase in the amount of financial aid we have awarded students: from a starting point in 2006 of $54,700,000, we awarded $88,000,000 last fiscal year. Other significant advances include our development of academic programs responsive to workforce needs, our efforts at improving student retention, and our graduation rate—particularly for our transfer students (see Report Card at www.ccsu.edu/strategicplan for details on these and other elements).

Finally, thanks in large part to the efforts of Governor Dannell P. Malloy, we broke ground for a new academic building, a critical need here for more than a decade. This building will not only provide much-needed classroom space for students, it will also, upon completion, enable us to begin the long deferred renovation and expansion of Diloreto and Willard academic buildings.

As you will read, several articles in this issue deal with numbers. As I have often said, the numbers we use to describe, for example, the cost of a new building, the improvement in our graduation rate, or the increase in our financial aid are more than mere numbers or data: they stand for the real students whose educational lives we have enhanced and whose prospects for success we have strengthened.

So we confidently face the changes and challenges the future brings, never losing sight that what we do is all for our students.

When Benjamin S. Kostin was discharged from the Army, in 1946, he returned to his hometown, Hartford, and soon found work in the accounting practice of Harry K. Schwartz. It was a small shop at the time, just three people. But in the wake of the war and the yawning Depression that preceded it, the nation’s and the state’s economies were poised to grow. And Schwartz’ small company was destined to grow, as well.

As Schwartz and Kostin prospered and, through successive transformations over seven decades, became what is now known as Kostin, Ruffkess & Company LLC, the company grew to its current position as 131st among the approximately 42,000 accounting firms nationwide.

Growth by Diversification
Managing partner Richard Kretz ’75 notes that the growing diversification of the firm’s clientele and its ability to nimbly respond to myriad needs with an ever-expanding spectrum of services has been crucial to the company’s long history of success. Kretz, who joined the firm shortly after graduation from Central, is also emblematic of the firm’s strong and productive ties to the University, which offers a rich source of talent adept in multiple and emerging fields. It’s a critical need for the highly entrepreneurial business.

“A lot of our work still has to do with tax and audit functions,” says Kretz, “but our partner group has a very entrepreneurial spirit. We actively look for new opportunities to provide services our clients need, and we’ve made many strategic acquisitions in order to ensure we can provide those services.”

Under Kretz’ leadership, for instance, the company expanded beyond the Hartford area in the 1990s, employing a merger with Gottesdiener and Company, a New London firm, to open a satellite office in southeastern Connecticut. And when the company’s clients continually requested referrals to wealth management advisors, it opened KR Wealth Management, LLC. KR Wealth Management advisors have the distinct advantage of leveraging the strategic tax planning, estate planning, business planning and succession planning resources of one of the region’s largest CPA and business advisory firms. Kostin, Ruffkess had invested heavily in computer technology during the early 1990s, introducing a wide area network in 1995 to link its West Hartford and New London offices.

In 2005, the acquisition of Themistos & Dane enabled the firm to open a second satellite office, in Springfield, Massachusetts. And only a year ago, the firm acquired ADNET Technologies, a 20-year-old Farmington company that helps businesses develop and implement innovative information technologies that impact investment returns.

“We found our clients were asking more and more for referrals to IT companies,” says Kretz, “so we saw an opportunity to expand in that direction.”

Such acquisitions, as well as development of new skill sets through strategic talent recruitment, have enabled Kostin, Ruffkess, now headquartered in Farmington, to define itself as much more than a traditional accounting, auditing and tax services company. In addition to information technology, the broad palette of services that distinguish the company includes management advisory services, security and compliance, fraud prevention and forensic accounting, wealth management and financial planning, business valuation and litigation support, and human capital consulting.
QUALIFIED TALENT
Offering a comprehensive array of services to a highly diverse clientele has also meant that the firm, which now has some 120 employees, is constantly looking for new talent. One of the ways it recruits junior employees is by maintaining a solid relationship with schools like Central, where the firm’s partners often make presentations about various aspects of the accounting profession and participate in job fairs. Those activities afford the partners and students opportunities to meet and size each other up.

While the firm recruits from all of Connecticut’s colleges and universities, it has had a special relationship with CCSU for years. Kretz nurtured the connection with his alma mater almost from the moment he joined the firm, after working first for an accounting firm in Hartford and then for a manufacturing company. One of his first assignments at Kostin was recruitment.

“We’ve always included Central among the mix of schools from which we recruit,” he says. “I was well aware of the quality of students at Central and the kind of education they get. Unlike many schools, where a lot of students come from outside Connecticut and eventually decide to leave the state, our experience has been that a high percentage of CCSU students are from the central Connecticut area and they have strong roots here. They want to stay in the area and build their careers here.”

Fully a third of Kostin’s partners are CCSU alumni. No other single university is so well represented in the background of the firm’s partners.

Brian Newman ’85, partner in charge of the tax department at Kostin, Ruffkess, concurs with Kretz. “We’re always looking for qualified talent,” he says. “One of the attractive features of Central is the fact that many members of the accounting faculty have worked in the industry. That means students graduating from the program have already had solid exposure to real world situations. Many of them widely seek out internships.”

John Turgeon, a partner who serves in a human resources role for the firm, routinely visits CCSU to talk with accounting students about employment-related issues — such as personal branding and the interview process — and participates in career fairs at Central and other area schools to recruit new employees for the firm.

“We look for strong academic records,” Turgeon says, “but we’re also interested in a balance with extracurricular activities that demonstrate communication, leadership and teamwork skills. Kostin, Ruffkess is a dynamic company, growing in many different directions. We aim to recruit bright young people who’ve clearly demonstrated an aptitude for the accounting process, people who can become productive quickly and grow with the firm. We find a lot of them at Central Connecticut State University.”
Associate Professor of Accounting Cheryl Crespi hardly fits the stereotype of dull bean counter, but she concedes it’s a tenacious one. “People often think of accountants, especially tax accountants, as immersed in the dry and arcane,” she says, shaking her shock of blond hair. “Even Albert Einstein said, ‘The hardest thing in the world to understand is the income tax.’” You see what I’m up against to make my teaching engaging.

It helps that Crespi brings impressive credentials to the task. She graduated from the University of Connecticut School of Law and was admitted to the bar in 2004. She also holds a Masters of Business Administration in accounting from UConn. Plus, she is a certified public accountant and a certified internal auditor, and worked as a plan controller at Aetna Inc. and was executive in residence at the University of Hartford’s Barney School of Business before joining CCSU in 2005.

A Variety of Teaching Techniques

Using a “guided-discovery” approach to teaching, Crespi helps students negotiate the complexity of the Internal Revenue Code. Through a logical sequencing of research, students learn how the code is written and can be understood. Then she challenges them: “Could you have written code sections better?” She adds with a touch of humor, “You’ll be given the opportunity to do so in an end-of-semester assignment.”

Crespi also employs podcasting as a teaching tool. She explains, “Students take their study notes from class and make an electronic file so they can plug in their ear buds and listen to music interspersed with two minutes of their study notes about financial accounting concepts as they jog or bike or walk.” Further, she says podcasts have become a popular way for many public accounting firms to keep their clients informed.

“My students are researching current tax news, turning it into a newsletter and developing it as a podcast to use with potential clients,” she says. “These are skills that will make them desirable employees.”

Learning accounting can be intimidating so Crespi starts with basics. “I particularly liked how she gave real-world examples, such as a pizza restaurant or candy shop, which helped me grasp more complicated accounting ideas,” says sophomore Ethan Markie, a construction management major. “Doing the financial statement analysis project was interesting, because it taught us how to decide which companies to invest in by looking at actual companies and their financial reports for 2010.”

Positioning Graduates for the Workplace: Doing Well by Doing Good

Crespi encourages her students to volunteer as tax preparers, putting into practice what they’ve learned and thereby helping some of Connecticut’s lower income families.

Volunteerism at CCSU got a boost from Dan Krah ’09, finance, who as an undergraduate first arranged for the community action agency Co-Opportunity, Inc. to come on campus to provide student training in CCSU’s inaugural partnership with the Volunteer Income Tax Assistance (VITA) program. Today Krah’s an experienced associate with the prestigious “Big 4” public accounting firm, PricewaterhouseCoopers.

“I loved volunteering, because I learned more about tax preparation and that helped me prepare for the CPA exam which I passed right after graduation,” he says. “My volunteer experience was a great talking point during job interviews.”

Building upon the relationship with Co-Opportunity, Crespi and Associate Professor of Accounting Monique Durant have coordinated training opportunities on campus with Co-opportunity, the Human Resource Agency (HRA) of New Britain, and the IRS. Crespi says, “This way our students can become certified by the IRS, which allows them to e-file for...
individuals and families meeting income levels of $50,000 and below,” she notes.

For the 2010 tax season, approximately 60 CCSU students participated in VITA training, and they operated two CCSU VITA locations, one on campus and one at Community Central in downtown New Britain.

Recent graduate Christine Albrycht ’11 was a standout accounting major and volunteer tax preparer. For her proficiency as the volunteer site coordinator of CCSU VITA, which she helped set up in its first year, she was offered a paid position by Co-Opportunity to be the site coordinator at two other locations for the tax season.

“I think my volunteer work proved that I can work with many different people from different backgrounds,” says Albrycht. “I also understand the laws and when in doubt I know how to find the answers. This experience cemented my aspiration to obtain my CPA license.”

Crespi is delighted to watch her students gain confidence. “Taxes are always changing—time frames and provisions may be added or repealed,” she reflects, “but I want my students to know how to interpret tax code, do their own research to solve questions that arise, and acquire tools to use that are mandatory in the accounting and tax accounting professions.” Beyond the students’ learning, the program has had an ongoing impact on Connecticut residents.

Albrycht considers her professor’s teaching style, recalling the Corporate Tax course. “You can tell she is excited about the subject, wants her students to learn and really cares,” Albrycht says. “Once she showed a YouTube video featuring Donny Osmond and his brothers singing ‘One Bad Apple’ to drive home the point that one bad liability does spoil many liabilities transferred to a corporation. I can imagine a class full of students humming that song while taking the final exam in order to keep that law straight.”
Professor of Physics Thomas Roman’s research brings to mind the stuff of Star Trek. He talks, for instance, about a region of space containing less than nothing. The implications, Roman admits, are bizarre.

How bizarre? “When negative energy or mass—so-called exotic matter—bends space-time, all sorts of amazing phenomena might become possible,” he wrote in an article co-authored with Lawrence H. Ford of Tufts University titled “Negative Energy, Wormholes and Warp Drive” (Scientific American, 2000).

And just what might those phenomena be? The authors point out: “There could be traversable wormholes, which could act as tunnels to otherwise distant parts of the universe.” Or a warp drive—that propulsion system so useful in Star Trek travel to distant galaxies—would allow for faster-than-light travel. And there could be time machines, which might permit journeys into the past. Just imagine a sci-fi plot in which you kill your own grandfather! Negative energy could even be used to make perpetual-motion machines or to destroy black holes.

Are such things possible? Do the laws of physics that permit negative energy place any limits on its behavior? For some 20-25 years, Ford, Roman, and their colleague Christopher Fewster of the University of York, UK, have been lead researchers exploring this area. They have co-authored more than a score of substantive articles published in notable scientific journals dealing with their research.

Four National Science Foundation Grants

A faculty member in the Mathematical Sciences Department, Roman, who joined CCSU in 1985, earned his PhD from Syracuse University where his advisor was Peter Bergmann, who collaborated with Albert Einstein on unified field theory. Roman’s research touches upon three important areas of physics: quantum field theory, Einstein’s theory of gravity (general relativity), and thermodynamics.

Since 2000 he has been awarded four National Science Foundation (NSF) grants. The most recent, awarded in August 2010, provided $135,000 to support his ongoing research on negative energy and relativity. “NSF grants, even for modest amounts, in the field of general relativity are highly competitive and extremely difficult to obtain,” observes Roman.

Upcoming Book on Time Travel and Warp Drives

This fall a book by Roman, co-authored with Allen Everett (Tufts emeritus), titled Time Travel and Warp Drives: A Scientific Guide to Shortcuts Through Time and Space will be published by the University of Chicago Press. Everett and Roman are affiliates of the Tufts Institute of Cosmology.

A clear, concise exploration of the nature of time and space, the book employs no math beyond high school algebra and explains, in understandable language, Einstein’s special relativity theory. It considers fundamental differences between traveling forward and backward in time and the theoretical connection between going back in time and traveling faster than the speed of light.

David Toomey, an English professor who teaches technical and nonfiction writing at the University of Massachusetts–Amherst and who is author of The New Time Travelers: A Journey to the Frontiers of Physics, describes the book as “a deeply informed, richly detailed yet immensely readable account of science at the frontiers.”
wrest from nature’s grip. Remains to be seen what new revelations they continue working hard to unlock the laws of

But physicists like Roman and his colleagues logical structure of the laws of nature. Thermodynamics — illustrating the intricate ties of the issue. “Now things get interesting,” then he pauses as he encounters the complexity of the issue. “Now things get interesting,” explains Roman, speaking excitedly as he adds, “So if one could use negative energy to construct wormholes or warp drives, time travel might become possible.”

In their negative energy article Roman and Ford asserted that the concept of negative energy arises in several areas of modern physics. Negative energy has an intimate link with the notion of quantum evaporation of black holes, those mysterious objects whose gravitational field is so strong that nothing can escape from within their boundary. It also plays a role in the creation and maintenance of wormholes, hypothesized “tunnels” connecting one region of space and time with another.

“The laws of quantum physics predict the existence of negative energy,” explains Roman, speaking excitedly as he adds, “So if one could use negative energy to construct wormholes or warp drives, time travel might become possible.”

Then he pauses as he encounters the complexities of the issue. “Now things get interesting,” he says. “Questions arise. Does nature put any constraints on the production of negative energy? Could you produce an arbitrarily large amount of it? Although quantum theory allows the existence of negative energy, it also apparently puts strong restrictions—known as quantum inequalities—on its magnitude and duration. As a result, nature appears to render the construction of wormholes and warp drives very unlikely.”

Sadly (or happily depending on your point of view), as of now, no time machines. In order for humans to travel back in time (if allowed at all), we’ll need vastly improved technology and a greater understanding of the laws of quantum gravity. Negative energy interweaves many parts of physics—gravitation, quantum theory, and thermodynamics — illustrating the intricate logical structure of the laws of nature.

But physicists like Roman and his colleagues continue working hard to unlock the laws of physics which govern this type of energy. It remains to be seen what new revelations they wrest from nature’s grip.

There is no logical contradiction in the fact that you simultaneously kill and do not kill your grandfather, because the two mutually exclusive events happen in different worlds that have no knowledge of one another. Like the banana peel mechanism, the idea of parallel worlds is also illustrated in many science fiction works on the theme of time travel. A good example, though one unfortunately out of print at the moment, is the excellent novel Branch Point by Mona Clee. Another is The Time Ships by Stephen Baxter. This is a sequel to [H. G.] Wells’s The Time Machine, and the writing style is deliberately—and quite convincingly—a copy of Wells’s own.

You could hardly be criticized for saying, “I see that such a theory is logically consistent, but surely the idea of parallel worlds is so outlandish that it should be confined to the world of science fiction.” Surprisingly, however, there is an intellectually respectable idea in physics called the “many worlds interpretation of quantum mechanics,” first introduced in a paper in Reviews of Modern Physics back in 1957 by Hugh Everett. According to Hugh Everett, there are not only two parallel worlds but infinitely many of them that, moreover, multiply continuously like rabbits.

To understand how this works, we need to talk a little about quantum mechanics. It is a theory that can predict only the probabilities of the various possible outcomes of an experiment. It never tells you with certainty what will happen. The probabilities are obtained from what is called the wave function of the object, and the equations of quantum mechanics (with which we will not have to concern ourselves) determine how an object’s wave function evolves in time in different physical situations.

Everything we know tells us that quantum mechanics is the physical theory that governs the behavior of all systems, large or small. In the case of macroscopic, (i.e., ordinary, everyday-sized objects) quantum mechanics tells us that the objects behave with essentially complete certainty, as they are predicted to do by classical (Newtonian) mechanics. Hence, we can usually forget the complications of quantum theory in dealing with everyday objects and simply use Newton’s laws of motion, which we know empirically work very well for such objects. However, when we deal with atomic- or subatomic-sized objects, we must use quantum mechanics if we wish to get predictions that agree with experimental observation.

From Time Travel and Warp Drives by Allen Everett and Thomas Roman, copyright 2012 The University of Chicago.
Carmen Elisa Espinosa ‘71, sworn in last April by Gov. Dannel P. Malloy as the first Hispanic female judge to serve on Connecticut’s Appellate Court, was just three years old when her parents brought their young family to New Britain and took up residence in Franklin Square in 1952. Attracted by the city’s then-burgeoning manufacturing plants, her father, who had been a fireman at an army base in Puerto Rico during World War II, quickly landed a job at the Stanley Svea Building Supply.

Espinosa was blessed with parents who, though they had not graduated from high school, had traveled to America because they were determined that their children would have a better life.

Espinosa recalls that when, a few years later, the family moved to West Main Street it meant that “I went to Slade Middle School. That was a turning point. The kids I was hanging out with there were going to college.”

Still, she wasn’t thinking of a career in law, let alone a career on the bench, when she enrolled at what was then still called Central Connecticut State College. There was no family role model for a legal career. Indeed, prominent Hispanic professionals were rare.

Espinosa was interested in languages and thinking about becoming a teacher. “I went to Central because I could live at home and work at the Grand Union supermarket,” she says, candidly.

Her Central education turned out to be important in ways she did not anticipate. “I was successful there,” she says. “That was very important, because there were no college graduates in my family.” She also met and became friends with Dr. Arnaldo Sierra, who taught Spanish. He was the first Hispanic person with a PhD that she had ever met. And Central gave her a solid education and a degree in secondary education with majors in Spanish and French.

Without those credentials she would not have received a fellowship to Brown University where she earned her master’s degree in Hispanic studies. After graduating from Brown, she returned to Connecticut and found a position as a Spanish and French teacher in Southington. But, she says, “I soon got tired of teaching. I didn’t like the repetition.”
Then, one day, she bumped into an old friend from her undergraduate days, who told her he was applying to law school. That sounded more interesting than teaching, says Espinosa, who admits she was a big fan of the Perry Mason television show when she was a kid.

So, in 1973, armed with a scholarship, she traveled to Washington, DC and enrolled in the George Washington University Law School. Practically overnight she realized she’d found the career for which she was destined. It was her intent to become a trial lawyer and she honed her legal skills – and her sense of justice – as one of a cadre of students from area law schools who participated in a consortium representing indigent people with landlord/tenant disputes. “It was great experience,” she says. “It helped me develop my investigating skills as well as my courtroom skills.”

But her first job, after completing her law degree in 1976, was wholly unexpected. One morning that spring she got a call from an FBI agent, who said he’d like to meet her. It turns out she had submitted her résumé to the FBI inadvertently, dropping it into a folder in the university’s job placement office without realizing where she was applying.

The “mistake” was fortuitous. Founding FBI Director J. Edgar Hoover had died in 1972. And with him died the agency’s bias against women.

“They were actively recruiting women,” says Espinosa, “and I was also a lawyer and could speak Spanish. I’m not ashamed to say I was a beneficiary of affirmative action.”

While getting herself in physical condition for the FBI’s rigorous training program, she also studied for the bar exam. She passed the exam in the summer of 1976 and, that autumn, began a three-and-a-half-year stint with the agency – first in Newark, New Jersey, and then in New York City – during which she saw service investigating white-collar crime and terrorism and engaging in foreign counterintelligence with the Chinese.

Though she says her experience with the FBI was good, she’s quick to add that she never gave up her plan to practice law. When her three years of obligatory service with the FBI ended she went back to the George Washington University placement office. It was there that she found an advertisement for a position as an assistant United States attorney in Connecticut.

With her FBI experience, Espinosa was the ideal candidate.

She stayed with the US Attorney’s Office for 12 years. During that time she was part of the team that, collaborating with the FBI, handled prosecution of the Puerto Rican guerrillas who robbed the Wells Fargo depot in West Hartford in 1983. Her work on the case earned her the US Attorney General’s Distinguished Service Award. She was also presented with the United States Department of Justice Special Achievement Award for her years of service on the job.

Those awards, and years of hard work, paid off when, in January, 1992, Gov. Lowell Weicker appointed her to the Connecticut Superior Court, making her the state’s first Hispanic and the first Hispanic woman to serve as a Superior Court judge. During two stints with the US Attorney’s Office in New Britain – she also presided over dockets in Hartford, Waterbury, and Bristol – her chambers looked down upon Franklin Square where she first lived when her family immigrated to the United States. The symbolism was not lost on her.

It was, of course, an immensely gratifying moment in her career. And, she says, the years she spent as a Superior Court judge were also very rewarding.

“It was an awesome responsibility, too,” she adds, describing it as working “in the trenches.” The cases over which she presided were often very difficult, she says, and the exposure to their harsh details and the grim evidence of crimes was corrosive. After nearly two decades of it, she was contemplating retirement when she was offered the opportunity to serve on the Appellate Court. It’s a satisfying way to conclude her career, putting her years of judicial experience to work reviewing the rulings of lower courts.

These days her Hartford chambers look down upon the majestic sweep of Bushnell Park. She works just a few miles from where her immigrant parents established a foothold in the United States nearly 60 years ago. But the road she’s traveled, between those two points, has been a long one, marked by a series of brilliant achievements, all but unimaginable when she was a little girl.
Ask Joe Ward ’82 if he ever thought, when he graduated with a Business Administration degree in finance, that one day he’d rise to his current senior executive position in the US Department of the Interior (DOI), and he exclaims, “Yes, absolutely! I was confident and thought I’d realize my dream to reach a senior level.

That positive energy has fueled a rich and varied career so that today, at 54, Ward is director of the National Business Center (NBC) in the DOI and manages a $400 million budget with some 2,000 federal employees and contractors. “Some kids don’t have high self-esteem and I tell the middle-schoolers I mentor—and my own four children— to have a positive attitude regardless of your circumstances. Never, ever give up! And remember when you’re knocked down, the important thing is to get up.”

Ward is a wizard of accounting and finance, making him well suited to oversee a huge domain. The NBC, as a federal shared service provider, supports the DOI and more than 150 federal agencies outside the department providing business management systems and services. Ward, who was appointed to his post in February 2011, is in charge of federal consulting, information technology, human resources, financial management, administrative operations, aviation management, the customer support center, and acquisition services. As chief executive for these eight lines of business, he oversees a widespread workforce headquartered in Washington DC, with major locations in Denver, Colorado and Boise, Idaho.

He shoulders a worthy mission and comments, “President Obama has stated, ‘The American people must be able to trust that their government is doing everything in its power to stop wasteful practices and earn a high return on every tax dollar that is spent.’ The NBC strengthens that trust and delivers a smarter and leaner government by leveraging economies of skill and scale and providing consolidated business management systems and services across federal agencies.” Ward has a high standard to maintain. The NBC is currently the only federal agency designated by the Office of Management and Budget and the Office of Personnel Management as a shared service provider in financial management, human resources, and payroll lines of business.

Have there been obstacles in his life as an African American? Ward considers, “I don’t think I’ve faced anything that others haven’t faced to get to where I am.” Yet he acknowledges that of the more than 2.1 million employees in the federal civilian work force, only 7,100 are members of the career Senior Executive Service, or about one third of one percent. African-Americans comprise about nine percent of this select group to which he has earned membership.

How the Journey Began

Ward, who was born in Hartford and grew up in Youngstown, Ohio, enlisted when he was 17 in the US Air Force where he’d serve with distinction for 26 years, retiring as a lieutenant colonel in 2003, assuming increasingly high-level roles in financial management and delivery of financial services.

“After five years in the military I was awarded an ROTC scholarship and came to Central,” he recalls. “My first impression was that it was a small, friendly campus, not overwhelming, but then I’d already been to Spain as a weather observer.” Ward’s business professors, he says, “pointed out my talent and bent for finance and helped me understand the opportunities in business where I might realize my potential.”

And Ward did just that. Armed with lots of enthusiasm and his business/financial acumen, he forged a career in the Department of Defense (DOD), where he served in increasingly responsible positions culminating in back-to-back Pentagon assignments from 1997 to 2003. “I loved it. It was a blast,” he observes lightly about his jobs providing accounting, finance, and travel support to Air Force personnel around the globe. Not only did he rub elbows with then-President Bill Clinton (at the USAF 50th birthday celebration) and Gen. Richard Myers, Chairman of the Joint Chiefs of Staff (at a Tuskegee Airmen convention), but his remarkable record led to the prestigious American Society of Military Comptrollers award recognizing him as one of the top accounting and finance officers in the DoD. Ward retired from the military in 2003 and worked as a consultant for two different “Big 4’ accounting firms as an executive in strategy and operations, and risk and advisory services respectively. In 2008, he accepted a civil service position with the DOD and while there, led an unprecedented usability review for the department’s enterprise-wide travel system. A highly emotional event for Ward happened in 2001 when he accepted an invitation from his stepmother, Elizabeth Nkonoki-Ward of Pre-Collegiate and Access Services, to return to CCSU to honor four members of the legendary Tuskegee Airmen, African-American airmen who served valiantly in World War II. “At the commencement ceremony where they received honorary degrees, it was my privilege to present a letter of appreciation to them from the Air Force chief of staff,” he says. “My own son, Joseph Ward, III, has followed in my shoes and is a 2005 graduate from the US Air Force Academy. Currently, he is a captain and pilot serving on active duty. We stood on the shoulders of the Tuskegee Airmen, the first blacks to fly in the Air Force. We never could have been able to be officers in the military if it weren’t for them.”

Both Nkonoki-Ward and her daughter, Lisa, remember Ward as a youth being a born “delegator but never bossy. He has a kind, generous heart and spirit and a great sense of humor. CCSU students can look to him as a beacon,” says Lisa. “They can say, ‘Wow, look how great successes are possible.’”
The fiscal year concluded at the end of June 2011 was a very successful year for fundraising at the University. The endowment exceeded $30 million for the first time in the University's history, and in July it reached over $36 million.

The total of dollars raised, led by the extraordinary generosity of Carol A. Ammon '73 and the remarkable support of the Anthony and Helen G. Bichum Fund, is one of the largest in the University's history, well eclipsing the previous mark of $2.9 million.

Our efforts also received outstanding support from our corporate partners, notably Travelers, Farmington Bank, Whelen Engineering, and Siracusa Moving & Storage.

And alumni contributions to our CCSUCCESS, Success Begins with CCSU annual fund program held steady, an exceptional outcome during these uncertain economic times.

This generosity has made it possible for the University to increase scholarships to students an unprecedented 48 percent. Those numbers represent a huge impact on our students, many who would not be able to get a CCSU education without significant financial support. Contributions to the Foundation truly make a difference in students' lives.

The University is deeply grateful for the loyal support of our alumni and friends. Because of it, we can continue to provide the margin of excellence for our students, helping them to achieve their dreams, strengthen our state's workforce, and become leaders in our communities.

As we look forward to the coming year, we will be increasing our efforts and programs to generate even greater support for our students. We recognize that in all we do students come first, and we hope you will join our mission to keep a CCSU education possible for generations of students to come.

By Nicholas Pettinico, Jr.  Associate Vice President, Institutional Advancement

The CCSU Foundation’s endowment continued its strong performance despite continued market volatility as investors react to weak economic data and both domestic and foreign debt concerns.

For the fiscal year ending June 30, 2011, the portfolio posted a solid return of 22.3 percent, nearly 2 percent above its benchmark.

“We are extremely pleased with the fiscal year return,” said Thomas I. Rogan, Chairman of the Foundation’s Finance and Audit Committee. “The high US unemployment rate, the weak housing market, higher gas prices and concern over the US and European debt crisis have all had a negative effect on the market. So, we are especially pleased with such a strong performance in light of this negative economic pressure.”

According to Rogan, the Foundation had approximately $33.4 million under investment as of June 30, allocated across domestic and international equities, fixed income, real estate and alternative strategies. Rogan noted that equities were up 32 percent for the fiscal year, fixed income up 8.4 percent, real estate up 37 percent, and alternatives up 5.8 percent.

Rogan reported that during the past fiscal year, the Foundation awarded over $578,000 in scholarships to CCSU students and over $500,000 in grants to CCSU in support of academic programs, undergraduate research, performance and fine arts, athletics and the library.
Civil War Conference and Commemoration at CCSU

It has been 150 years since the beginning of the Civil War, when Confederate forces attacked Fort Sumter in South Carolina. The Connecticut Civil War Commemoration Committee made sure Connecticut didn’t let the anniversary pass by without, well, a bang—as 12 cannons were fired in front of the State Capitol on April 12, following remarks from CCSU Professor of History Matt Warshauer ’90 and Governor Dannel P. Malloy.

A few days later, on April 15, a conference titled “Commemorating the American Civil War: Connecticut Connections” was held in CCSU’s Student Center. Director of the Gilder Lehrman Center for the Study of Slavery, Resistance, and Abolition David Blight, Yale University professor of history, gave the keynote lecture, speaking about Americans’ fascination with the Civil War. According to conference organizer Warshauer, “Blight captivated conference attendees with consideration of the war’s meaning 150 years later.” “He pointed out that one third of Americans can still trace a descendant of the era and that the conflict has remained seared in the nation’s memory.” Over 220 people attended the daylong program of seminars, lectures, and breakout sessions.

Held on April 16, the Commemoration Weekend’s opening ceremonies were complete with Civil War re-enactors, the Governor’s Foot Guard, and National Guard units from across Connecticut who marched with their Color Guards across campus and fired a 21-gun salute. The Connecticut Blues Fife and Drum Corps from Durham played the national anthem, followed by speeches from CSU Professor of Philosophy Felton Best; Brooker DeVaughn, co-chair of the Connecticut Civil War Commission; Gary Miller, senior minister of Asylum Hill Congregational Church; CSU Trustee Ron Pugliese; Commissioner of Veterans Affairs Linda Spoonster Schwartz; Emmy award-winning journalist and host of the morning’s ceremonies Diane Smith; New Britain Mayor Timothy Stewart; Warshauer; and even Abe Lincoln himself (played by Howard Wright).

For the remainder of the weekend, guests had plenty of options. There were historical exhibits on Connecticut’s role in the Civil War on display in the Student Center and an exhibit titled “Picturing the Civil War: Kellogg Lithographs and Civil War Envelope Covers” in the Samuel S.T. Chen Fine Arts Center. The Victorian-era lithographs, produced by the Kellogg brothers of Hartford, depicted patriotic images and Civil War scenes, including the firing on Fort Sumter and the Battle of Bull Run.

Throughout the weekend in nearby Stanley Quarter Park, re-enactors set up encampments and participated in two major battle re-enactments. Confederate and Union troops fired upon each other using rifles, muskets, and cannons until both sides eventually pulled out, leaving the park dotted with fallen soldiers.

Sunday morning visitors also had a chance to catch a vintage baseball game played by the Friends of Vintage Base Ball league from Hartford. Decked out in brightly colored uniforms with bibs, none of the fielders wore gloves, and the pitchers tossed the ball underhanded to batters, as was the practice in 1861.

The commemoration was sponsored by the CCSU Alumni Association, CCSU Foundation, Provost’s Office, Carol A. Ammon School of Arts & Sciences, Center for Public Policy and Social Research, and History Department, as well as by Travelers Foundation, The Connecticut Humanities Council, Bill McCue, the Berlin and New Britain Lions Clubs, and the Connecticut State University System Foundation.

Dr. Matthew Warshauer ’90

Cannons at the Capitol

Confronting Confederates
While most of her high school classmates were making their weekend plans, Sara Larkin ’12 was signing up to serve her country. The anthropology major and three-season athlete at Central joined the National Guard during her senior year at Ellis Tech High School in Danielson. “The military not only teaches you to follow orders, it also teaches you how to be a leader, and that’s important in every aspect of life,” says Larkin, who is now using those leadership skills at CCSU.

Larkin saw the military as an opportunity to serve her country, better herself, and obtain a college education. She signed up in August of 2002 for eight years — six years of active duty and two years of inactive duty.

Now 26 years old, Larkin was first deployed to Germany in February 2006. She remained there for 18 months. Reflecting on the hardships of being deployed Larkin notes, “when you’re away, your life basically stops.”

After returning to the states Larkin saw CCSU Professor of Anthropology Ken Feder on television in a National Geographic special. Larkin had been in the process of researching colleges in Connecticut and was especially interested in anthropology. “I knew immediately that I had found my school after listening to Dr. Feder,” says Larkin. She became a student at Central in spring 2008.

It wasn’t until the following semester that Larkin first tried out for the CCSU cross-country team. She had not participated in sports during high school but was determined to make the team. “I was the kid who walked the mile in gym class,” she notes. Larkin first got interested in running during her time in boot camp at Fort Leonard Wood, Missouri, where she ran her first 5K. Larkin is now on the cross-country and indoor and outdoor track teams.

After three productive college semesters Larkin received military orders in the mail. Despite her inactive duty status, the letter informed her that she would be deployed once again. This time she was headed to Iraq, where she spent the last year of her military contract. It was one of the most difficult periods of her life. “The military forces you to push yourself,” states Larkin, who attributes her mental strength and confidence to her military background and her experience in Iraq.

Not surprisingly, she excels in the classroom as well. Larkin was recently inducted into the Anthropology Honors Society, which requires members to maintain a 3.70 GPA in anthropology courses and a 3.50 GPA overall. She is also regularly on CCSU’s Dean’s List.

“I positively adore the Anthropology Department at Central — it’s like a family,” says Larkin. She feels that her professors genuinely care about their subject and their students. “Dr. Feder even used his connections to get me an internship this summer,” she notes. Her internship at The Institute for American Indian Studies, in Washington, CT, was a hands-on experience working at a Native American pre-historic archeological site.

For professors who have had Larkin in their classrooms, the respect is mutual. “It’s great to have a student in class who you can’t get anything by,” says Feder. “Sara thinks, and her questioning causes me to think too.”

In addition to being a leader she is simply a great friend and teammate. Speaking of her teammates, Larkin notes, “I have had life experiences that they haven’t had, and I love to help them in any way I can.”

Larkin is on track to graduate next May and plans to study human evolution and pursue a PhD in archeology. Larkin reflects, “I know I made the right decision by coming to Central. I have truly found myself and what I want to be.”
What do paraffin wax, lard, fast food French fries and beeswax all have in common? Alex Haralambous ’13 will tell you that each is an organic hydrocarbon that surprisingly has the potential to fuel the firing of a rocket engine. How does Haralambous know that these staples of everyday life can transform into rocket fuel? He’s the team leader of CCSU’s Hybrid Propellant Rocket Engine (HPRE) team: a group of students pioneering research in the Northeast to reduce the environmental impact of rocket launches.

It is not every day that a rocket launches. We hail cabs, drive cars, board airplanes and ride subways, but our society has yet to mainstream space travel via rockets. One reason is the astronomical costs of shuttle missions, not to mention the quantities of toxic chemicals and gasses expelled as the engine propels the craft skyward.

CCSU’s HPRE team, a one-of-a-kind educational experience in the Northeast, collaborates over two semesters to determine the feasibility of powering a rocket engine with environmentally safe paraffin wax. The environmental effects are no different than burning a large candle. Haralambous explains that some conventional rocket fuels are highly flammable and pose a risk to anyone handling them. While safety is a concern with conventional fuels, using paraffin wax and oxygen — which are inert substances — eliminates almost all risk.

Safety, cost, and environmental impacts are all interests of the HPRE team. According to Haralambous, “With any engineering project, we become stewards of engineering.” Moral and creative inspirations motivate the team to remain at the forefront of their research while acknowledging like-minded peers at Stanford University and the University of Tennessee. As the team leader, Haralambous is “always trying to do something that will expand who I am as a person.” The progressive implications of an environmentally friendly rocket fuel keep Haralambous and the team striving for impressive results.

Most people are curious about thrust. Synonymous with lift-off, thrust propels a craft from its base, upward. Can paraffin wax actually fuel a lift-off? Haralambous explains that the team “does not perform true launches of the test engine we have constructed. We just test the firing of the engine for the purposes of gathering data.” However, this small scale engine is expected to produce fifteen pounds of thrust, which is no small endeavor for an environmentally safe, student-built piece of machinery.

Haralambous reflects that the team’s “secondary goal is to spread awareness of the research we are performing to show people that new green technologies do not just apply to the Toyota Prius and the automotive industry.”

Haralambous credits Associate Professors of Engineering and Technology Viatcheslav Naoumov, Nidal Al-Masoud, and Professor of Engineering and Technology Alfred Gates with creating the culture at CCSU that fosters the team’s research and allows their project to thrive. Naoumov describes Haralambous as “one of the best students in my fall 2010 Propulsion Systems class” and praises his leading role within the HPRE team.

“Based on successful test results the [HPRE] research student paper was submitted and accepted for presentation and publication at the American Institute of Aeronautics and Astronautics 50th Annual International Meeting and Exhibit which will be held in January 2012 in Nashville, TN. Given the top level of the conference in the world it is an honor and recognition of success for the CCSU mechanical engineering students,” says Naoumov.

In several semesters Haralambous, a part-time student and employee of United Illuminating, will graduate with a bachelor’s degree in Mechanical Engineering. He plans to take the LSAT and become involved in the business aspects of the field, seeking work as a utilities lobbyist. Haralambous anticipates having to “lobby for why I’m building this massive structure in your backyard.” Here at CCSU, his fruitful research on the feasibility of green rocket fuel techniques, as well as his experience as a team leader, prepare him to voice the needed partnership between technology and the environment.
A new era has begun for the Central Connecticut State University Department of Athletics. On Wednesday, August 10, the Blue Devils launched a new branding initiative, highlighted by 11 unique marks, a new Blue Devil mascot and a custom font developed for the department.

“It is a very exciting day because I believe this is a critical step in not only honoring our rich athletics tradition and our history of success, but reestablishing and defining who we are and who we aspire to be — the premier program in the Northeast Conference,” Director of Athletics Paul Schlickmann said.

“The visible results are a representation of the department’s core values: competitiveness, pride, and passion,” he added. “A very powerful but less visible aspect of this effort is the unifying and galvanizing impact that this logo will have on the spirit, pride, and identity among all members of the CCSU athletics and University family, including our student-athletes, student body, faculty and staff, alumni and our fans.”

The process began over a year ago. The new logo and font were designed and developed by Rickabaugh Graphics, an Ohio-based company with extensive experience in collegiate athletics branding. Rickabaugh used input from many members of the campus community to create an array of potential designs, while also ensuring that CCSU’s new brand was unique.

“When I first arrived at CCSU a number of months ago, it was quickly apparent that everyone on campus had tremendous pride for their university. In addition, the athletic programs boasted a rich history and a future full of great promise,” said Eric Rickabaugh, owner and creative director at Rickabaugh Graphics. “The Rickabaugh Graphics staff realized that the new look for CCSU athletics must portray that same pride, history, and promise.”

Following the initial stages of development, Rickabaugh held focus groups to gather feedback and information on a few potential concepts. The groups included CCSU student-athletes, coaches, alumni, fans, and members of the CCSU campus community.
The information gathered through those sessions was used to put the final touches on the new Blue Devil.

“This was an inclusive process that touched an extensive cross-section of people in the athletics family and the campus community. We thank everyone for their feedback and input along the way,” Schlickmann said. “This collective effort has created a bold logo and design of which we can all be proud. It’s a great day to be a CCSU Blue Devil.”

The new logos include 11 total marks that can be used in full color (blue, white and a new gray) or in classic CCSU blue and white. CCSU teams have started wearing the new logos this fall on practice gear and uniforms.

“We’ve taken early steps in getting this new brand and logo entrenched in our building and current facilities,” Schlickmann said. “We will continue to utilize the new marks in moving the department forward in the next several years.”

Working with Presto Sports, the Blue Devils also launched the all-new CCSUBlueDevils.com. The site features an entirely new design and look, and will feature live audio and video streamed through a partnership with the Pack Network. Pack Network is one of the industry leaders in audio and video streaming, and has been a partner with the NEC for the past several seasons.

“Our partnership with Presto Sports is another positive, critical step in promoting our program and our new brand identity,” Schlickmann said. “Along with our new relationship with the Pack Network, our fans will now be able to follow our teams online and on their mobile devices with ease.”
Groundbreaking for New Academic Center
Connecticut Governor Dannel P. Malloy, Commissioner Donald J. DeFronzo, Department of Administrative Services, and President Jack Miller break ground for a new academic building at CCSU. The building is part of the CSUS 2020 capital improvement initiative and will provide sorely needed classrooms, laboratories, and work space for students and faculty necessitated by increased enrollment and two 50-year-old classroom buildings. The building is slated to open in fall 2013. Speaking to an audience of faculty, staff, administrators and special guests, Governor Malloy said, “There is no academic institution that the state of Connecticut owns which is more important than this one.”

Carol A. Ammon Day at CCSU
In gratitude for her magnificent $8 million gift, the University celebrated the naming of the Carol A. Ammon School of Arts & Sciences in mid-May. Dean of the School Susan Pease and CCSU President Jack Miller joined Ammon at the unveiling of the name. In the second photo below, Ammon and Pease pose with the first Ammon scholarship recipients (l-r): Katia Feliz, Heath Leber, Jennifer Cahill, Rachel Spagnoletti, and Victoria Sepe. Leber is also a recipient of the Fran Libera Scholarship, funded by Ammon three years ago.

New NSF Grant Aimed at Drawing Women, Minorities to Sciences & Math
A $600,000 National Science Foundation grant will expand CCSU’s efforts to support and prepare a diverse group of highly trained professionals in the mathematics and science fields. The four-year grant funds the Computer Science, Mathematics and Physics (CSMP) Scholarship program, designed to attract high caliber students from under-represented, low-income backgrounds to pursue education in one of the three fields.

This is the second round of NSF funding for Professors of Computer Science Stan Kurkovsky and Bradley Kjell, Professor of Mathematical Sciences Ivan Gotchev, and Professor of Physics and Earth Sciences Nimmi Sharma. In 2006, the group received nearly $500,000 for a similar initiative, and this new version builds on its strengths and successes. During CSMP’s first iteration, the goals were to increase the enrollment and retention of under-represented students. According to Kurkovsky, those targets were met a year early.

The number of incoming female and minority students in CSMP disciplines increased 38% and 108% respectively. The one-year retention rate increased 25% for females and 38% for minority students, and the number of degrees awarded to female and minority students in CSMP disciplines increased 33%.

CSUS Trustees Awards
Two CCSU faculty members were honored by the Connecticut State University System Board of Trustees for their exceptional teaching and research. Associate Professor of Finance Joseph B. Farhat received the CSUS Trustees Teaching Award. He uses assessment extensively and feedback in order to improve instruction and learning in his courses. His intensive use of technology to promote experiential and collaborative learning includes web-based tutorials and simulations; an online repository of case studies where students publish their projects; and online tools to promote interaction and engagement with course content.

Assistant Professor of History Matthew G. Specter received the CSUS Trustees Research Award. He focuses his research primarily on the development of political thought, ideology, and institutions in 20th-century Germany. Specter has expanded his research to encompass modern European and global dimensions of the history of human rights, humanitarianism, and international law.

New $750,000 Grant to Benefit Rehabilitation Counseling Students
CCSU’s rehabilitation counseling master’s program is singular to Connecticut and the only program of its kind that is accredited by CORE (Council on Rehabilitation Education). Thanks to Assistant Professor of Counseling and Family Therapy Cherie King’s efforts, a $750,000 Rehabilitation Services Administration (RSA) grant was procured from the Department of Education. The grant will support students with tuition and a stipend. Currently, CCSU is the only school in Connecticut receiving this grant.

The rehabilitation counseling master’s program, started at Central in the 1980s by Professor of Counseling and Family Therapy Judith Rosenberg, prepares students for work in a variety of rehabilitation, human service, and community agencies, assisting individuals with emotional, mental, social, and physical disabilities and challenges. Today, war veterans returning from deployments with injuries and post-traumatic stress disorder account for a large percentage of individuals who seek services from rehabilitation counselors.
NorthStar Wealth Partners (NSWP), a wealth management firm in the West Hartford area, was recently named the 2011 Best of Hartford for Financial Advisory Firms by Hartford Magazine readers. Founded by CCSU alumni Robert Laraira ’86 and Brandon Marinelli ’01, NSWP’s services include providing advice and strategies for retirement, investment, estate planning, and charitable giving.

CCSU alum Bill Berloni ’89, was presented the Tony Honors for Excellence in the Theatre during the Tony Awards ceremony in June for his work as a professional animal trainer. His training credits include the original “Sandy” in the musical Annie and “Chico” in the play Legally Blonde, as well as other Broadway hits such as The Wiz, Nick and Nora, and Chitty Chitty Bang Bang. He has also trained animals featured in the ballet, movies, television shows, and commercials. The animals Berloni works with have all been rescued from shelters and humane societies, and, when they are ready to retire from the bright lights, they clock out and head back home to Berloni’s farm in Connecticut. Berloni received his BFA in theatre from CCSU in 1989.

Hartford Business Journal selected Jason D. Newman ’95, a partner at Kostin Ruffkess & Co. LLC (left), and Chad Williams ’98, director of program services at Boys & Girls Clubs of Hartford Inc., as two of their distinguished “40 Under Forty” “best and brightest” business leaders in Hartford. As HBJ notes, “They all have achieved a level of success early in their careers, yet for each, the best is likely yet to come.

Michael Foran BSED ’86, MS ’90, SYC ’92, principal of New Britain High School, was named the 2012 MetLife/NASSP National High School Principal of the Year. Foran is the first Connecticut principal to win the award. Since beginning his tenure as principal at NBHS in 2007, Foran has been credited with improving the work environment, raising test scores, reducing the dropout rate, and establishing the New Britain Academy for Health Professions at the school. The award brings a $5,000 grant to the high school. (photo courtesy of Hartford Courant)

Kate Mullen ’78 was recently inducted into the Connecticut Women’s Basketball Hall of Fame. Of the seven individuals inducted in April, she was the only college-level coach. Mullen, who will coach for her 20th season at Wesleyan this year, also serves as an associate director of athletics and adjunct professor.
Educational Leadership Awards
In April the School of Education & Professional Studies Educational Leadership Program, recognized alumni and faculty who had been honored as distinguished educational leaders. Above, left to right:

Hassan Robinson, SY ’11, 2010 Teacher of the Year, East Hartford School District, Fourth Grade Teacher at O’Connell Elementary School, East Hartford

Jill Wnuk, SY ’11, 2010-11 CAS Middle Level Exemplary Educator & 2010 Local Hero, Ronald McDonald House Charities, Social Studies Teacher, East Hartford Middle School, East Hartford

Maxine Ursery, 2010 Lindgren Family Scholarship Awardee, Fifth Grade Teacher at Anna E. Norris School, East Hartford

Timothy Maule ’91, 2011 Teacher of the Year, Berlin School District, Fourth Grade Teacher, Hubbard Elementary School, East Berlin

Keynote speak Dr. Doris Kurtz, superintendent of New Britain Public Schools.

Michelle Marion ’02, 2011 CAS Assistant Principal of the Year, Assistant Principal, East Hartford High School, East Hartford

Dr. Anthony Rigazio-Digilio, 2011 Education Leader of the Year, Connecticut Association of Supervision and Curriculum Development (CASCED), Professor & Chair, Department of Educational Leadership, CCSU

Dr. Robert Lindgren ’66, MS ’68, 2010 West Indian Foundation Outstanding Community Service Awardee, Adjunct Professor of Educational Leadership, CCSU

Dr. Richard Lindgren ’58, 2010 West Indian Foundation Outstanding Community Service Awardee, Adjunct Professor of Educational Leadership, CCSU

Joseph A. De Feo ’79, Outstanding Alumnus Award
CCSU Dean of the School of Engineering and Technology Zdzislaw Kremens presented Joseph A. De Feo ’79, President and Executive Coach at Juran Institute, the award for Outstanding Alumnus during the School of Engineering and Technology’s awards dinner last semester.

Hall of Fame & Alumni Association Awards
In April, the Alumni Association Awards were presented to several alumni in recognition of their outstanding service to CCSU, or the Alumni Association, and to the community, as well as of their professional excellence. Leonard F. Gengel ’87 was awarded the Distinguished Alumni Service Award. After the award presentation, five alumni were inducted into the Athletic Hall of Fame: Corsley Edwards II ’01; Jacqueline C. S. Hadden ’00, MS ’03; Marcin Kaczmarek ’02; Jane M. McFarlane ’01, and former CCSU Swimming and Diving Head Coach Ray “Jack” Suydam (posthumously). Pictured directly below, from left to right, Skinner, Cortes, Gengel, McFarlane, and Hadden.

The Smile
CreateSpace, 2010

James M. Clark ’79
Connecticut’s Fife & Drum Tradition
Wesleyan University Press, 2011
The first full account of this beloved and colorful American music tradition in Connecticut. Details abound for instruments, folk song traditions, musicians, and events.

T. Garth Connelly ’83
The Regia Marina’s MAS Boats, 1915-1945
Nimble Books, 2011
Describes every MAS boat built and operated by the Italian navy during the First World War, the inter-war years, and the Second World War.

Joan Conning Afman, MA ’85
Death Island
Camel Press, 2011
In this adventure-spoof, Danny Manning, who has been wrongly convicted of his wife’s murder, is sent to Death Island, an exile for those who earn a death sentence, and the setting for America’s favorite reality TV show. “Death Island is Hell disguised as Paradise,” wrote Amazon.

E. Diann Cook ’98
The Andersuns: Jarrell’s Sweet Tooth
Authorhouse, 2010
Cook uses the story of Jarrell Andersun—a eight-year-old boy with a giant sweet tooth—to reinforce healthy eating habits. One day Jarrell refuses to eat the dinner his mother prepares, so she puts him in a “time out.” While there, he has a strange dream that changes his mind about eating sweets instead of balanced meals and shows him the importance of healthy eating. Illustrations by the author.

Kathy Handley ’61
A World of Love & Envy and Birds of Paradise
Riverhaven Books, 2011
In Birds of Paradise, a novel, broken hearts are catalysts for personal re-invention. A World of Love and Envy is a collection of short stories, flash fiction, and poetry.

David A. Horan ’75
Escaping Quicksand
Shop My Web, Inc., 2011
With an honesty that often startles and always engages, Horan provides an emotionally complex and compelling account of what it means to live with progressive multiple sclerosis. His wonderful storytelling skills make his personal tale a riveting read for anyone interested in what it means to live with chronic pain and physical decline. David’s wife, Mary Horan, adds the partner perspective, which lends Escaping Quicksand the endearing tone of a witty, well-told love story.

Erik Thoenes ’87
Life’s Biggest Questions: What the Bible Says about the Things That Matter Most
Crossway Books, 2011
Thoenes, a California theologian, asks and answers 15 significant questions about God, the Bible, Jesus, and the church.

Robert Valuk ’64
The Collector: Bar Napkins Memoirs
Outskirts Press, 2011
Featuring a great “unreliable narrator,” Valuk’s book purports to be the biography of a 350-year-old “collector” whose stories, chronicled on bar napkins and other scraps, are satirical and thought provoking.
61
Coach Al Pelligrinelli was inducted into the Berlin High School Athletic Hall of Fame. He is also a member of the Connecticut High School Coaches Association Hall of Fame and the CCSU Alumni Association Athletic Hall of Fame. Dr. Robert M. Valuk recently published a sci-fi book entitled The Collector: Bar Napkins Memoirs. Although it is his first foray into the world of fiction writing, Dr. Valuk has published numerous articles and booklets while working as CEO of a financial investment newsletter, The Financial Report Card, and as a school principal and superintendent of schools in Connecticut and Rhode Island.

66
Dr. Gene J. Kozlowski is professor of information systems at Northeastern State University in Broken Arrow, OK, where he has been a faculty member since 1973. Mary (Orsini) Odell and Fred Odell were declared the winners of the CCSU Alumni Association photo contest. They hosted the CCSU Blue Devil in Florence, photo contest. They hosted the CCSU Alumni Association.

68
Suzanne (Doyle) Greenbacker MS ’90, who has been with Plainville schools since 1999, is retiring from the Linden Street Elementary School where she has been principal for the past 12 years. Dr. Robert J. Smith marked his 10th year as the founding director of The Carol Autorino Center for the Arts and Humanities at Saint Joseph College with multiple honors for his administration: official citation from the Connecticut General Assembly, proclamation from the Mayor of West Hartford, and the Chamber of Commerce Noah Webster Award for “extraordinary commitment to the Town of West Hartford.” The presentations were made during the 10th-anniversary celebration for the Center, hosted by actor Chris Lemmon and featuring performances by music, dance and theatre artists from among the over 100 greater Hartford organizations that have held events in its auditorium. Dr. Smith is also a faculty emeritus and school historian of The Woodstock Academy, where he served for over 30 years as chairman of English and director of Theatre. He lives in Pomfret Center, CT, with his wife, Janet.

69
Karen L. Smith MS ’87, principal at Derynoski Elementary School in Southington, was promoted to assistant superintendent of Southington Public Schools. William C. Thomson MS ’74 is an investment manager for Sovereign Investment Group in Troutman, NC.

70
Richard F. Connell has retired as senior executive vice president and chief administrative officer at Selective Insurance Group Inc.

71
Leo T. Camosci, owner of LTC Construction in New Britain, has assumed operation of the Whinstone Tavern at the city-owned Stanley Golf Course. Hon. Carmen E. Espinosa, a trial judge for the past 19 years, has been appointed to the Appellate Court of Connecticut by Gov. Dannel P. Malloy. Business and Mathematics Professor Donna B. Leonowich MS ’75 has been appointed interim associate dean of academic and student affairs at Middlesex Community College (MXCC) in Middletown.

72
Golf industry veteran William F. Campbell, Jr. has been named new membership director at Liberty National Golf Course in Jersey City, NJ. Former president and current executive board member of the Rhode Island Golf Association, Campbell has more than three decades of experience in the industry. He began his career as an educator and coach at Rogers High School and Salve Regina University in Newport, RI in 1995 and became chairman of the U. S. Amateur held at Newport Country Club. Debra L. Fox was named a 2011 Marcus Ruscitto Fellow by the Institute for Entrepreneurial Excellence at the University of Pittsburgh. The award will support her enrollment in the institute’s Entrepreneurial Fellows Program, which helps leaders of high-growth enterprises develop strategic plans. Fox is president and CEO of Fox Learning Systems, Inc. in Pittsburgh, PA, a full-service professional video production company that creates and produces online education curricula for both professionals and family caregivers, specializing in consumer education for families with aging parents. John Paul Gravale-Pannone, assistant state’s attorney and senior prosecutor at the courthouse on Huntington Street in New London, has retired after 30 years of distinguished service to the State of Connecticut.

73
The Connecticut High School Coaches Association has honored Michael A. Pitruzzello MS ’78, athletic director at Middletown High School, as Outstanding Athletic Director of the Year. The honor caps a long list of awards earned by the veteran coach.

74
After nearly six years overseeing the town’s seven schools and nearly 4,000 students, Guilford Schools Superintendent Dr. Thomas A. Forcella is moving to North Carolina to become superintendent of the Chapel Hill-Carrboro City school district. Forcella’s career has included positions as teacher, principal and superintendent in Connecticut and Massachusetts.

75
Berlin High School (BHS) Athletic Director and Coach James E. Day was inducted into BHS’s Athletic Hall of Fame at festivities on March 20, 2011. Theresa (Bielinski) Gerratana was sworn in as the state senator representing the sixth senatorial district communities of New Britain, Berlin and Farmington in the Connecticut General Assembly after having won a special election. Clemson University visiting scholar and former National Parks Director Fran P. Mainella [MS] received the Distinguished Alumni Award from the Neag School of Education Alumni Society of the University of Connecticut. Mainella teaches in the parks, recreation and tourism management department at Clemson.
news director at Fox 61 in the early 1990s, has returned to the station for a second tour as news director after leaving that role at KDKA, the CBS affiliate in Pittsburgh. She has also previously held the position of news director at WCVB and WFXT in Boston and WISN in Milwaukee. The Portuguese American Leadership Council of the United States (PALCUS) has announced the reelection of Fernando Goncalves Rosa, deputy director of Hartford Economic Development Corporation, as chairman of its 13-member board of directors. Rosa has been associated with the organization since 1995 and has served on the board since 1999. Mary (Bali) Tomolonius, former three-term first selectwoman of Canton and the founder and president of Tomolonius Design, a graphic design firm in Collinsville, has been appointed executive director of the Connecticut Association for Community Transportation, a non-profit association committed to promoting and improving public transportation in Connecticut.

78 Katherine “Kate” Mullen, who recently completed her 19th year as head women’s basketball coach at Wesleyan University, was inducted into the Connecticut Women’s Basketball Hall of Fame at its annual induction ceremony in April. Framingham, MA-based PeopleCube, provider of workplace management software solutions, has hired Peter M. Tarca, a 25-year industry veteran with a specialty in clean tech and energy efficiency, as general manager of its intelligent buildings business unit. Tarca previously served as CEO of three different Massachusetts-based businesses: Proliphix Inc., a developer of native Internet protocol distributed energy management solutions, based in Westfield; InterSense, Inc., a provider of tracking, navigation, visualization, and stabilization applications headquartered in Billerica; and Vibrant Technologies, a supplier of broadcast digital equipment and new technologies based in Bedford.

79 Kenneth Champion is programme director and deputy to the executive director of the United Nations in the Office of the Capital Master Plan, whose mission it is to manage the $1.8 billion historic renovation of the United Nations headquarters complex in New York City. Timothy N. Harvey, instructor of sports medicine and director of the health/fitness promotion concentration at Mercyhurst College in Erie, PA, was promoted to assistant professor. Harvey previously worked as the head athletic trainer at Rutgers-Newark University and St. Bonaventure University. Margaret (Lynch) O’Donnell, principal of Topstone Financial Consultants, a 22-year-old tax and accounting firm located in Redding, is treasurer for the Town of Redding. Paul Pellerin, owner of Antique & Classic Car Services, has written his first book about Connecticut’s car history, Connecticut Created Cars, in recognition of the 25th Silver Anniversary of the Connecticut Council of Car Clubs and New England Air Museum.

28 – Central Focus Fall 2011
The University offers a wide range of opportunities for alumni and friends to support educational programs they are passionate about. Below are a few to consider. Gifts to these funds may be made online at www.ccsu.edu/giving. If a fund you are interested in supporting is not listed, you may simply type it in, in the “Other” category and be confident that your contribution will support the fund you have indicated. For more information: alumnidept@ccsu.edu or 860-832-1740.

Institutional Support

Friends of the Library

The Friends of the Library Fund provides support for the Elihu Burritt Library in order to enhance teaching and research and meet the diverse educational needs of the CCSU community. The Fund provides program and acquisition support to augment institutional monies appropriated for a quality public university library.

Welte Society

The Welte Society provides funds for special cultural programs to enrich and broaden the lives of Central’s student, faculty and neighbors.

International Education

James-Hauser International Exchange Fund

Originally established to support faculty, administrative, and student exchange opportunities with institutions in East Asia, South America, and the Caribbean, the James-Hauser Fund has recently been expanded to support the strategic goals of the George R. Muirhead Center for International Education and supports exchange opportunities throughout all of Asia, Africa, Latin America, and the Middle East.

Scholarships

CCSU Alumni Association Scholarship

The CCSU Alumni Association Scholarship Fund provides scholarships for undergraduate (junior or senior level) students who are children or grandchildren of alumni and 1) completed at least two semesters at CCSU; 2) enrolled for 9 credits or more during the term when the scholarship is applied; 3) minimum GPA of 3.0; 4) evidence of service, leadership, and academic achievement; and 5) documented efforts to finance educational costs.

Educational Support Services Scholarship

This fund support for students enrolled in any University program aimed at providing access and opportunity to economically disadvantaged or educationally underprivileged students (e.g., Educational Opportunity Program, Connecticut Collegiate Awareness and Preparation Program).

Foundation Scholars

The Foundation Scholars Fund provides scholarship support for high-achieving, incoming first-year students who rank in the top 25% of their graduating class and have achieved a minimum of 1100 on the SAT.

Graduate Student Association Scholarship

Provides support for matriculated graduate students who have completed a minimum of 15 academic credits in residence at Central Connecticut State University, have earned a minimum cumulative grade point average of 3.50 or higher and have demonstrated exemplary involvement and leadership in student or community service activities.

We Are Proud To Be Your School’s Credit Union

Supporting students, alumni, faculty and staff with the best banking – for less, including:

860.828.2790  888.242.2600

Achieve Financial CREDIT UNION

Together We Can.

Proud Sponsor of Blue Devil’s Athletic Program

Student Government Association Scholarship

Provides scholarship support for a full-time matriculated undergraduate student who has demonstrated exemplary involvement and leadership in the University community and who has earned a minimum cumulative GPA of 2.5 or higher.

Veterans Scholarship

Awarded to the undergraduate student(s) named as the Student Veteran of the Year at the annual Veterans Recognition Program, or similar program, regardless of the expected graduation date of the recipient(s). To be eligible for the Student Veteran of the Year award, a student must 1) be in good academic standing; i.e., minimum of 2.5 GPA; 2) have junior or senior class status; i.e., minimum of 53 credits; 3) show evidence of exemplary service to the University, the community and/or the country, and 4) have served active U.S. Military duty for a minimum of 90 days other than training.

Athletics

Frank Marietta Athletic Scholarship Fund

The Frank Marietta Athletic Scholarship Fund provides much needed support for grants-in-aid to CCSU student athletes.

Athletic Development Fund

The Athletic Development Fund provides support for the intercollegiate athletic program at CCSU.

If you would prefer, you can also enable the University to allocate your gift to where it is needed most by indicating Area of Greatest Need.
Reconnect with Central!

“With my Central degree, I went on to Notre Dame Law School and found that I was well prepared for the challenge. When I returned to Connecticut, I found an incredible network of Central grads who provided opportunities.”—Wendell Davis ’89, J.D.

Success begins with CCSU

Wendell Davis encourages alumni to revisit Central’s campus and reconnect both as volunteers and financial supporters. “There’s an electricity on campus,” he says. Your gift to the annual fund, large or small, can keep that electricity sparking. Online at www.ccsu.edu/giving, just click on “Make a gift.” Or call 860-832-1740. Thank you!

Please make a gift and help support our students.
