From Hartford to Sri Lanka, CCSU MIS graduates are building exciting careers using Information Technology to provide strategic leadership in business.

In the next decade, 8 out of the 20 fastest growing occupations will be computer related.

–U.S. DEPARTMENT OF LABOR

The MIS program at CCSU reflects the latest innovations in IT leadership and management, information technologies, e-business, project management, networking, and systems analysis and design.

Looking for a future full of promise? Choose MIS and learn for success.

The MIS program draws upon the expertise of dedicated faculty who challenge, motivate, and encourage students in their classes. Real-world themes help students to current best practices and future trends.

CAREERS IN MIS

The Management Information Systems (MIS) program prepares students to be leaders in business using information technology for competitive advantage. Students develop key leadership skills in:

- Information Systems
- Telecommunication and Networking Technologies
- Decision Systems
- Project Management
- Knowledge Management
- Enterprise Strategies for Competitive Advantage

MIS students learn from excellent instructors in high-tech classrooms. A low student-to-faculty ratio means students receive a close personal education. Hands-on instruction with state-of-the-art technologies enables students to acquire both theoretical and practical knowledge.

MIS graduates are prepared for such highly rewarding careers as:
- Applications Developer
- Network Analyst
- Database Administrator
- Support Technician
- Programmer
- Web Developer
- Systems Analyst
- Business Analyst
- Information Manager
- Project manager
- MIS Consultant
- CIO

The Management Information Systems Department is part of the CCSU School of Business, which is located in the Vance Academic Center.

THE COURSES

The MIS program is built on a solid foundation of business courses and innovative core courses providing real-world learning opportunities.

**Required courses in the Common Business Core**
- Introduction to Financial Accounting
- Introduction to Managerial Accounting
- Introduction to MIS
- Managerial Communications
- Managerial Finance
- Legal Environment of Business
- Fundamentals of Marketing
- Fundamentals of Management and Organizational Behavior
- Strategic Management

**MIS Core Courses:**
- Contemporary Business Application Development I & II
- Project Management for Business
- E-Business
- Database Management Systems
- Systems Analysis and Design for Business

There are four MIS Specializations listed below. Each have three courses plus a directed elective from a select set of MIS upper division courses which students pick with their major advisor.

- Business Analytics
  - Business Analytics and Decision Support
  - Enterprise Strategies and Transformations
  - Analytics Applications

- Information Security and Infrastructure
  - Business-Driven Infrastructure Design
  - Enterprise Strategies and Transformations
  - Information Systems Security and Assurance for Business

- Business Application Development
  - Business-Driven Infrastructure Design
  - Project Management and System Implementation
  - Mobile Development for Business

- Enterprise Resource Planning Systems
  - Business Analytics and Decision Support
  - Enterprise Strategies and Transformations
  - Enterprise Systems

Students also complete upper-level business courses, selected with the help of a department adviser.

THE EXPERIENCE

MIS graduates are exceptionally well prepared for rewarding futures, thanks to our comprehensive approach to Information Technology.

The MIS program integrates knowledge and skills in business, management, and information technologies. Students learn to build and modify information systems and use the information generated to make informed decisions.

Students acquire course work and experience integrating knowledge and skills in information technology leadership, emerging technologies, and apply this to business situations.

“CCSU provided me with the business, technical, and communication skills necessary to understand and apply technology to solve business problems; to successfully market myself to employers; to build a substantial network of life-long personal and professional contacts; and to prepare me for an MBA degree for further career advancement.” Jason Rosa, Director, Bureau of Information Systems and Technology at Connecticut Department of Emergency Services and Public Protection.

Internships in local businesses allow students to gain valuable real-world experiences while still attending classes. Students completing internships gain a competitive edge in the marketplace, making it easier for them to land full-time, career-starting jobs.

The Management Information Systems Students Club assists students in pursuing both academic and career success. The Club provides seminars on relevant issues, and serves as a link between the evolving needs of Connecticut businesses and the objectives of the MIS student body.
