

CVS Healthcare

Job Code 540206 Systems Engineer

To be posted on BrassRing (1633914BR)

Position Summary : CVS Healthcare is looking for an early in career Middleware Systems Engineer to become a member of a team that designs, configures, builds, and maintains a variety of analytical, data governance, metadata, event messaging, and machine learning products and tools on premise and in the public cloud in support of the Enterprise Healthcare, Retail, and Pharmacy businesses. The ideal candidate must embrace technology, be open to learning, building new solutions, and be a technical evangelist viewing technology as a solution to advance our consumer engagement and best in class experience.

Required Qualifications : Experience in product installation, configuration, and maintenance.
Experience in working in on premise installations and in public clouds (Google, Azure).
Experience in application migrations.
Experience in Linux and scripting languages.
Experience with performance monitoring and tuning.
Experience with troubleshooting and problem solving.
Ability to work off hours including nights and weekends.
Ability to be on call in a team rotational schedule.

Preferred Qualifications : Experience with Hadoop Clusters.
Ability to work with a team in a fast paced environment.
Ability to solve technical problems quickly.
Experience with automation, preferably Ansible.
Ability to concisely explain complex technical findings to audiences at all levels.
Knowledge of security policies and guidelines, adherence/enforcement of company policies and standards, and authorization and authentication for protecting sensitive assets.

Education : Bachelor's Degree or equivalent work experience in Computer Science, Engineering, or related discipline.
